Report Type:  Leadership

The Highlands Company
Publisher of the Highlands Ability Battery™

The Highlands Company ©2017 Highlandsco.com
Effective leaders understand at their core the importance of knowing themselves. As a leader, you may have taken other assessments which have informed you about your personal style, behavioral tendencies, others’ perceptions of you, interests, etc. A complete understanding of your effectiveness in leadership roles includes information about your natural abilities and how they impact your self awareness and self management.

You have a starting place on each of the ability continuums of the Highlands Ability Battery (HAB). And, you have learned, or can learn, to move up and down those continuums by developing specific skills. Being aware of your natural abilities enables you to know which skills to develop, helps you identify others who have talents different from your own, and provides you with an understanding of the behaviors you are likely to revert to under stress. Understanding yourself can result in small yet significant changes in your style.

Knowing your natural abilities can help you answer questions such as:

- Are my talents in alignment with the responsibilities required in my work?
- Are there select skills I want to develop?
- What are my potential blind spots?
- Do I have natural abilities that currently have no outlet?
- How can I continue to grow in my work?

Knowing your abilities can help you steer toward tasks and leadership roles that use your talents, and encourage others to help you achieve the results you want.

This Self Management tool for Leaders can help create shifts in how you think about your position and work roles such as:

<table>
<thead>
<tr>
<th>Move from thinking</th>
<th>Move to thinking</th>
</tr>
</thead>
<tbody>
<tr>
<td>I will know how to lead when I am selected for a leadership role.</td>
<td>I need to be aware of what I don't know when I take on a leadership role.</td>
</tr>
<tr>
<td>Leadership roles require me to do what I already do, just on a bigger scale.</td>
<td>Leadership roles require additional competencies that may require some skill building.</td>
</tr>
<tr>
<td>As a leader, I will make changes I know need to be made by using my knowledge and expertise.</td>
<td>As a leader, decision-making will be more complex, and I need to know how to work through others and use influence.</td>
</tr>
<tr>
<td>My current effectiveness as a leader will carry over to other leadership roles.</td>
<td>Effectiveness in a leadership role is a combination of my talents and the circumstances.</td>
</tr>
<tr>
<td>Leaders are expected to be focused on the work, avoiding anything personal to leak into their roles and responsibilities.</td>
<td>“You hire a person for a job and the whole person shows up for work.” (Quote from Chester Barnard, Industrial and Organizational Psychologist).&quot;</td>
</tr>
</tbody>
</table>
Interpreting Your Scores

As you have discovered, the HAB measures your abilities objectively by requiring you to perform specified tasks on the computer, not by asking you to describe yourself or by asking you to answer questions about yourself. This enables you to know what kinds of tasks come easily to you, and also which tasks are more difficult for you.

Most of the HAB ability worksamples you took were timed. The speed with which you do a particular task is one important measure of how easy that task is for you. When a task needs more effort – when the answers do not come quickly - it may be because the ability required is not a strong ability for you. In some worksamples, we measure not only your speed but your accuracy in performing a particular task.

For each worksample, you are given a percentile ranking score or how you scored relative to everyone in our database. This provides you with an objective comparison of how you did on the worksample relative to how other people have done. If you scored high in an ability as compared to other people, you can conclude that this is a strong natural ability for you. High scores do not guarantee high performance in roles requiring an ability, only that you have the capacity to do so.
If you scored low, this means successful performance of tasks requiring this ability will require more time, effort or energy than someone who scores higher. It does not mean you cannot perform that task effectively, only that it will take more effort. For example, if you score low in Idea Productivity, leadership roles requiring you to stay focused on a single project will be easier for you than those requiring multiple, simultaneously competing demands. If you score high in Idea Productivity, the reverse is true; leadership roles requiring multiple, simultaneously competing demands will be easier for you than those requiring a singular focus. Remember - it’s not important to have a high score on every worksample; but, it is important to know and understand what each of your scores means for you as a leader or prospective leader.

We use the terms “ability” and “natural abilities” to mean degrees or qualities of performance which stabilize at or about age fourteen. We distinguish them from skills and achievement. Skills are learned through education, training, practice and experience. We define achievement to mean present level of performance - i.e., what we are able to do at this moment by calling upon the combination of our natural abilities and our skills. These definitions do not necessarily agree with the definitions used by others, but we have found that they serve to mark essential differences in our performance in school and at work.

**Abilities In Context**

Any assessment you take should be considered within a broader context of who you are – a combination of 8 critical factors including your abilities, skills, interests, personal style, goals, values, family history, age, and position in the leadership hierarchy. It would be a mistake if you were to use abilities or any other measure alone to make important work and life decisions. Abilities constitute one basic and foundational part of our Whole Person Model.

**Remember, natural abilities:**
- Define which roles are easy for you and which are more challenging.
- Can cause dissatisfaction if ignored.
- Remain relatively stable over time.
- Can come in many patterns – none of them inherently good or bad.
- Determine what kind of leadership role fits you best.
- Reveal your ideal leadership style.
- Act as guides to how you learn and how you communicate.
The following sections discuss your results on each of the nineteen worksamples which make up the HAB. Each result is a measure of one of your natural abilities. You will see a general definition of the ability; how the ability was measured; your individual score; and how to interpret your score in your role as leader or potential leader.

To make them easier to understand and review, the abilities are grouped under the headings **Personal Style**, **Driving Abilities**, **Specialized Abilities**, and **Vocabulary**. The scores shown are the same as in your Ability Profile.

Everyone has his or her own pattern of abilities. There are no “good” patterns or “bad” patterns. Every pattern means that some things will be easy to do or learn, others more difficult. In using the information you get from the HAB, it’s important to move toward leadership roles that capitalize on your own pattern of strengths.

Among other things, you will want to take your abilities into account when:

- Self-assessing the fit between your abilities and the responsibilities of your current or future leadership roles.
- Determining the steps you need to take to reach the ideal leadership role.
- Managing your responses to specific challenges and people.
- Managing your work schedule.
- Utilizing your best way to get up to speed and learn new information.
- Communicating your ideas and decisions in a way that encourages others to respond and/or follow you.
- Maximizing your performance at work and seeking confidence in your approach.
- Relating to your fellow workers.
- Achieving satisfaction and harmony in your life.
PERSONAL STYLE

This section discusses your results on three scales which indicate the style with which you approach your work; the Generalist/Specialist scale, the Extrovert/Introvert scale, and the scale which measures your Time Frame Orientation. Each scale is a continuum, and your score represents where you naturally fall on that continuum.

![Generalist-Specialist](A quick view of this worksample)

This scale tells us how people respond to group dynamics such as consensus-building and ownership of work. It also influences a person’s natural need for broad and/or detailed information and tendencies when communicating with associates. At one end, Generalists enjoy a broad approach including a wide variety of interests and projects, often sharing in all of the responsibilities for completion; at the other end, Specialists enjoy digging deep into and completing their own projects independently, often developing areas of specialization and knowledge.

No one is completely a Generalist or a Specialist - everyone shows some aspects of both. Your score indicates that you are a strong Generalist. This means that you:

- Share your style with other Generalists.
- Focus first on the team or organization rather than the individual.
- Expect others to pitch in to reach a common objective.
- Enjoy a variety of tasks and responsibilities.
- Can generally anticipate how employees and colleagues will react to new assignments and how customers will react to new or changed products or services.
- Are more comfortable sharing responsibilities than taking complete responsibility for tasks from beginning to end.
- Find it relatively easy to delegate and to accept new responsibilities.
- Naturally organize individuals into teams.
- Can act as facilitator of meetings and the builder of consensus.

As leaders, Generalists tend to like variety in their jobs and work. They demonstrate interest in many aspects of their work, although they may prefer not to know any one area in-depth. Their orientation to new information is often referred to as taking “a mile wide and a foot deep” approach. This orientation affects how they communicate and how they prefer to be communicated with – usually, with a top-line summary and those back-up details that are necessary for a specific outcome.
Generalists tend to appreciate and rely upon the skills and knowledge of their associates - at least, upon those who are able to work for a common purpose and towards group consensus.

**TIPS:** If you need or want to sharpen your leadership skills, you may need to learn to:

- Be comfortable imposing a decision when the group cannot agree.
- Take credit - some, but not all of the time - for your ideas and for successful outcomes.
- Refuse to be “just a member” of the team and insist on leading the way.
- Understand and incorporate the ideas of associates who function best as individual contributors.
- Encourage productive challenges to the ideas and values of the majority.
- Study and learn the functions and duties of each member of your team to enable you to talk to each of them sympathetically.
- Map out and monitor the details of each project to make sure that every participant knows exactly what’s expected of him or her.
- Look for, understand and cope with the feelings and frustrations of those of associates and employees who manifest a different style from yours.
No one evidences Introversion or Extroversion all of the time; everyone shows some characteristics of both. Your score indicates that you are a mid-range Extrovert-Introvert and have some characteristics of both.

Extroverts get energy from being with and talking to others, and they especially like unstructured interactions. Extrovert/leaders enjoy being highly visible. They tend to wilt when they’re forced to spend large chunks of time alone - working on reports, budgets, and presentations. The optimal work environment for the Extrovert/leader is one that allows for a great deal of interaction with people.

Introverts get their energy by working alone or with small groups. They prefer structure in their interactions with others - they want meetings to be set at regular intervals and at specific meeting times; they contribute best if the meeting agenda is fixed and distributed before the meeting - this gives them time to think about the issues.

Because you are in the mid-range:

- From your Extrovert side, you get energy from being and working with people; you can become stressed and dissatisfied in jobs that require you to work alone all of the time.
- From your Introvert side, you get energy and renewal from time spent alone; no matter how skillful and sensitive you may be, long periods of interaction with others will leave you drained.
- You can effectively divide your time between work with others and work that requires solitary effort for sustained periods.
- You enjoy interaction with others; on the other hand, you are able to be alone some of the time and you enjoy this as well.
- You may find that you lean more to one style than the other; if so, you may need to structure a good balance between being with others and being by yourself.
- You will probably find it easy to restore any energy imbalance you feel at work through activities after work.
TIPS: If you need or want to sharpen your leadership skills, you may need to learn to:

- Divide your work day between time alone and time with others.
- Learn to identify the Extroverts and the Introverts and adjust your style to theirs as needed.
- Use your introversion side to talk one-on-one with the introverts in your group.
- Use your extroversion style when you conduct meetings and conferences.
- Find a sounding board (personal coach, lawyer, executive friend) to share your ideas with.
- Walk away from arguments and controversies with your superiors - tell them you need time to reflect.
- Urge others to approach you even at times when you seem tense and remote; make it clear that you’re always available to them.
Leaders can easily identify their primary or most natural personal style by measuring each of the nine patterns or combinations from our graphic against their normal daily activities. The most natural combination of Generalist/Specialist and Extrovert/Introvert elements will be the one that enables them to perform these activities with the greatest satisfaction and energy and with the smallest expenditure of time, effort and stress. Leaders do not all fall into any one pattern any more than other people do, but, as leaders, they will face more situations than other people in which their natural style will require modification and adjustment to another style.

Nothing in a typical leader’s profile would suggest an inability to adapt to and perform well in a different style. The process of adapting to a different style becomes a skill that successful leaders learn over time and use often.

The best leaders monitor the drain on their natural levels of energy and stamina when using a different style and learn to adjust in one or both of two ways:

- They move out of the adopted style pattern and back into their own as soon as possible by finding and working with an associate for whom that style is more natural.
- They stay in the adopted style for as long as necessary by making adjustments in their other responsibilities and activities in order to maintain their natural levels of energy and stamina.
Leaders with a blended **Networker/Administrator** Personal Style prefer to pursue a variety of interests and activities. As **Generalists**; as **mid-range Extroverts/Introverts**, they are able to choose between involving others in their activities or in conducting them alone. While they can enjoy being part of a group, team or organization, they may sometimes prefer to carry out their responsibilities by themselves and to bring a cohesive idea or product to the group for comments and reactions.

Leaders with this style excel in situations requiring a broad-based understanding of multiple elements and the integration of these elements into a consistent and well-defined concept or plan. They prefer to act as the hub of a wheel - the center which holds the spokes together. They serve as project managers, liaison between teams, mediators and judges.

**Time Frame Orientation**

This scale tells us how different leaders think about and utilize time and naturally consider the impact of present actions on future plans. Time Frame Orientation influences the time horizon a leader is most comfortable with in deciding upon his or her objectives, plans, and future. How far into the future is the leader likely to look? What is his or her tolerance for the length of time between a decision and a result? What steps will he or she take if a goal is not reached within the time allotted? At what point does the leader provide encouragement or rewards? What is the Time Frame for the work environment within which the leader must function?

While everyone tends towards one of three natural Time Orientations (Immediate, Intermediate and Long-range), successful leaders know that they have to build skills and methods which enable them to operate in all three. When a production goal is not reached, for example, a leader will want to know why and will respond either by moving in a different direction all together or by modifying and extending the date for completion. Leaders need to know their natural time horizon, however, in order to select the kind of project they will be most comfortable with (e.g., a short-term advertising campaign vs. an extended pharmaceutical research project).
Your results in this worksample indicate that you prefer to plan and work with a **Long-Range** Time Frame Orientation. You naturally keep track of targets and plans which are more than five years in the future.

As a person with a **Long-Range** Time Frame Orientation, you naturally:

- **✓** Have a predisposition to look 5-10 years into the future for making plans, or considering the impact of your present job on your career.
- **✓** Find your orientation helpful in jobs that require long-range planning, trend analysis, research, or extended negotiations.
- **✓** Can work to accomplish shorter time-range targets by consciously breaking your long-term goals into short-term segments.
- **✓** May become so focused on the future that you lose control of the immediate present and of your short-term goals.
- **✓** Can manage work in the short-term by keeping long-range goals on one list and the shorter targets for each on another. This will force you to pay attention to tasks in the shorter term.

Leaders whose natural Time Frame is **Long-Range** focus on goals and projects in the long-term future - more than 5 years from the present. Their strength lies in defining and setting long-term goals and in anticipating the effect or impact of current projects on these goals. The direction of their thinking is typically backwards from a long-term vision or target to the current work and decisions that will enable them to reach the target. Although they rarely have each step mapped out between the here-and-now and the future, they are able to sense whether their current decisions will get them closer to, or take them farther away from, their goals. They lead with patient guidance and continued articulation and implementation of a long-range plan or vision, and are able to find, retain and motivate workers who can see the connection between their jobs and the leader’s long-term vision.

Leaders with **Long-Range** time horizons often resist events, activities, or work requirements which have no apparent connection to the long-range future. If they can’t see how their work connects to something long-term, they may feel the work is irrelevant. The sense of having “all the time in the world” can result in worker procrastination - a problem long-range leaders must learn to manage.

**TIPS:** Leaders with a **Long-Range** Time Frame Orientation may need to:
- Use external aids (or people) to help keep the here-and-now organized.
- Break long-term goals into well-defined and shorter targets.
- Articulate clearly and often the connection between seemingly unimportant requirements in the here-and-now and the future.
- Help workers to organize systems to promote commitment and prevent procrastination.
- Monitor and redirect when necessary the path to the long-range vision or target - learn to see when adjustments in direction are needed.
- Manage your natural instinct to avoid participation in the here-and-now.
- Recognize and reward “baby steps” along the way to achieving long-term results.
THE FIVE DRIVING ABILITIES – HOW WE REASON

The five Driving Abilities constitute our reasoning abilities. We use our reasoning abilities to arrive at conclusions, solve problems and make decisions. Two of these - **Classification** and **Concept Organization** are called “convergent reasoning” abilities. Classification and Concept Organization, are sometimes given other names. Classification is called inductive reasoning or diagnostic thinking. Concept Organization is called deductive reasoning or analytical thinking. A third – **Idea Productivity** - measures divergent reasoning - the ability to solve problems by producing new ideas. The ability to reason spatially is measured by the two worksamples **Spatial Relations Theory** and **Spatial Relations Visualization**.

The five Driving Abilities are generally more assertive and difficult to ignore than the other abilities. They are like fast-moving streams which carry a swimmer easily from one place to another. With the current, the swimmer moves with grace and ease. Against the current, the swimmer may flounder. Leaders will probably have an instinctive sense which of the Driving Abilities will help them to move easily with the current and which may cause them to flounder. They may also sense which currents to follow and which to resist, and when to seek the help of another swimmer. But the wisest course for anyone who is chosen or aspires to lead is to build upon the solid foundation of self-knowledge. By studying their results on the HAB, leaders can learn to use the Driving Abilities to manage the currents around them. The newly-acquired self-knowledge will tell them when to push, and when to pull back from, the abilities that drive them.

The Driving Abilities are very powerful and pressing, and they influence almost every part of our work lives. This is true whatever an individual’s results high or low. Each one of these abilities forces itself into our lives. It is important to take them into account when considering your work roles and responsibilities.

Over time and through experience, the best leaders learn to recognize which of the reasoning combinations comes most naturally and easily to them. They learn when to encourage and when to suppress this natural pattern. They become skilled at gauging when to apply it to the problem at hand, and when to adjust or modify it by adopting another pattern - at least, temporarily. As they do with the other natural abilities, the best leaders also know that fitting their work environment to their natural reasoning pattern results in enhanced performance as well as in greater job satisfaction.
Classification (CL) is the ability to see a common link among scattered, discrete and unorganized facts or ideas. Years of research have shown that Classification is a valid measure of inductive reasoning. High CL scores are evidence of a Diagnostic or Consultative problem solving style; low CL scores indicate an Analytical or Experiential problem-solving style.

Roles and responsibilities requiring a continuous rapid pace of solving problems or are chaotic, confined by few parameters, and where a premium is placed on identifying solutions rather than implementing them are a good fit for those with high CL. For example, medical diagnosticians are often confronted with a barrage of disassociated symptoms. They must find those which are relevant to a cure, those which can be discarded, and ultimately, tie the critical facts together into one diagnosis which results in a treatment. Roles requiring study, patience in problem solving, parameters within which to implement identified solutions, or reliance on previous experiences are a good fit for those with low CL. For example, when working within a structured environment where following protocols is important. Or, when developing proteges and exercising patience with mistakes for the sake of longterm development.

As a person with high Classification, you:

✓ See patterns and relationships quickly and easily among discrete data and objects.
✓ Constantly use this ability with it influencing almost every aspect of your working life and can find it difficult not to use.
✓ Need challenges in problem-solving as a foundation of your work.
✓ Are likely to get enjoyment from using this ability, and to be unhappy in positions that don’t use it.
✓ Love to solve new problems and to “figure things out”.
✓ Summarize sets of ideas quickly and jump to the end of discussions.
✓ See pros and cons in a plan or idea quickly and easily. On the negative side, unless you exercise self-discipline, you can be indecisive as a manager or decision-maker, because you are constantly weighing alternatives.
Can be easily bored in positions that require routine and repetitive tasks.

Do not like to be bothered with details and can usually gather enough information to get by or “wing it.”

Must use education and self-discipline to channel this ability properly. Just because something is learned quickly does not necessarily mean it has been learned well.

Will usually enjoy activities that involve rapid-fire problem-solving, advice-giving or consultation.

Will usually find it difficult to not use; likely to experience impatience with those who don’t see things as quickly as you do.

High CO scores are evidence of an Analytical problem-solving style; low CO scores, when combined with low CL scores, indicate a Pragmatic problem-solving style. High CO makes many tasks easier for a leader. A few examples: when the leader has to arrange and present the details of a financial report to the press; when working with architects and engineers in the planning and building of a new plant; when reviewing and revising copy for an ad or news release. These are all tasks which demand the logical organization of thought and ideas.

As a person with high Concept Organization, you:

Communicate ideas using a logic track that others can follow.

Analyze ideas and concepts and arrange them easily into their logical sequence. This enables you to make ideas clear to others.

See the logical consequences of events, making it possible for you to predict, order, and plan schedules showing when things will happen.

Can see how all the pieces of a project fit together.

Can use this ability easily for any planning activity.
✓ Organize internally/mentally and may not need to organize objects around you externally.

✓ Enjoy arranging the steps in a task in sequence with the urge not to leave out any steps.

✓ Have an advantage in any kind of task that requires analytical thinking (e.g., literature, history, research, accounting, etc.).

✓ Can use this ability effectively in any work with a recurring need to organize materials or information; or to plan, prioritize or develop logical conclusions and plans.

✓ Will use this ability often, both in and outside of work. The opportunity to use it in your other activities may substitute for the need to use it as part of your job.

✓ Will be able to see problems and pitfalls when work schedules are not analyzed and organized.
In our experience, combining CL and CO creates nine distinct and identifiable problem-solving patterns. These problem-solving patterns are influenced by an individual’s natural abilities for inductive reasoning (Classification) and/or deductive reasoning (Concept Organization) - each combination of abilities determines how that individual will most easily and naturally approach the process of problem-solving. Because many leader responsibilities involve anticipating, confronting and solving problems at every turn, it becomes essential to have self-awareness about your natural tendencies.

As leaders study and observe others with different problem-solving patterns, they realize that it’s relatively easy to master the patterns which are closest to their own natural or preferred pattern (see graphic). The most difficult pattern to master is the style which is most unlike their own style. These principles apply also when a leader communicates or interrelates with a person possessing a different pattern. For example, a leader who naturally approaches problem solving Diagnostically, may find it difficult to communicate with, or to mentor, an individual whose natural approach is Analytical. On the other hand, the Diagnostic Problem Solver will probably find it relatively easy to work with or to guide someone with a blended Diagnostic/Consultative style or someone with a blended Diagnostic/Pragmatic style. The ideal, of course, is to learn how to work with and leverage the talents of people with styles different from your own in order to accomplish group or organizational goals.
Leaders with a Consultative Problem Solving Style are able to arrive at solutions quickly and then explain the logic behind their solutions clearly and persuasively. Their preference is to have problems to solve, although they are less likely to enjoy the time-consuming steps required to implement the solutions they come up with. Because of their relatively high CO scores, leaders with a Consultative Problem Solving Style enjoy explaining their solutions to others.

High Classification allows these leaders to perform well and feel most at home in fast-paced or hectic environments (a hospital emergency room, a criminal court room, a political campaign).

An ideal environment for leaders with a Consultative Problem Solving Style is one in which they must constantly face problems and identify solutions, deploy and instruct a group or team, and monitor the group’s progress. Because their style adjusts best to constant problem-solving, these leaders need to learn to:

- Slow down enough to ensure they have all the relevant information they need to solve a particular problem.
- Curb the tendency to be impatient and to interrupt their thoughts and speech.
- Review staff performance of the work they delegate to keep projects and processes on target.
- Confirm that team members understand their instructions and reasons for a solution.
- Review their initial decisions with others to avoid a rush to implement them.
- Resist the natural inclination to view every discussion or conversation with subordinates as an opportunity to solve a problem.

Your combination of high Classification and high Concept Organization indicates you will be most comfortable functioning in roles capitalizing on your natural Consultative Problem Solving Style.
As it relates to problem-solving, rapid Idea Productivity becomes extremely useful when you are forced to face a new situation or when you have no personal experience upon which to base a decision. As it relates to communication, Idea Productivity allows for persuasion or thinking of different approaches to reach a listener.

Idea Productivity can also influence the natural ability to stay focused on one task or idea and the preference for responding to new ideas. Some leaders prefer to articulate and focus on one idea at a time (“focusing”); others prefer to let their minds generate lots of possibilities and to consider many ideas at once (“brainstorming”).

Your score is in the high range for Idea Productivity. Leaders who score high generate ideas continually. A measure of the quantity of ideas produced, and not of their quality or originality, high Idea Productivity results in a continuous stream of sometimes-related and frequently-unrelated ideas and in multiple streams of virtually simultaneous thought. These leaders excel in roles that draw on their strength in producing their own ideas, inducing others to produce theirs, and motivating the discussion and selection of ideas that lead to a concerted plan or solution.

Because one idea tends to trigger another, leaders with high Idea Productivity often work on several projects simultaneously; they may actually have difficulty maintaining a single focus for prolonged periods of time. If they have ten tasks and ten days in which to complete them, these leaders will devote some time to each of the tasks every day and may or may not complete them by the deadline.

When delegating or assigning work, leaders with high Idea Productivity run the risk of confusing the people they work with. As new ideas occur to them, these leaders will often share them with others without thinking them through or expecting them to be acted upon. Each new idea will burst forth as if it were the key to the problem. The result is that employees may shift their time and energy aimlessly from one project to another, feel frustrated by the inability to complete anything, and become confused about goals and priorities.

As a leader with high Idea Productivity, you:

✔ Have a large number of ideas in your head at any one time. You may have trouble turning the flow of ideas off at will.
✓ Enjoy putting this ability to work.

✓ Can call on this ability in solving problems and overcoming the objections of others.

✓ Are likely to be restless and dissatisfied in roles that demand routine tasks and attention to small detail.

✓ May find it difficult to concentrate for long periods of time on a single subject or project, unless it falls within your range of interests.

✓ Are able to see and explain a new way to look at a problem and to make people understand your message.

✓ Enjoy working on jobs in which the major roles are problem-solving and persuasion.

✓ Need an outlet; if rapid ideation is not a regular part of your work responsibilities, find an outlet for it outside of work.

**TIPS:** To make maximum use of your **high Idea Productivity**, you may want to:

- Find ways to record and measure your ideas as they occur and develop a system that enables you to review and confirm your priorities throughout the day. If you don’t record them, you may lose them.

- Develop routines and habits that keep you focused when you need to be.

- Gravitate towards roles and environments that require or encourage new and varied ideas - e.g., advertising, editing, and theatre.

- Ask if others are open to your ideas before you jump in and suggest them.

- Let others know they are a resource for new ideas and that you will consider their ideas carefully.

- Identify when brainstorming is appropriate and when it is time to stay on task (to avoid pulling the group off target).

- Set and communicate your priorities.

- Edit or review the quality of your ideas before sharing them with others.
This worksample helps us to measure whether a leader thinks first or most easily in the theories which control the functioning of systems – both intangible systems like astronomy or computer science – or in the tangible components of those systems. To restate the difference – do you understand easily the principle which enable mechanical or inter-personal structures to operate, or do you prefer to apply yourself to the practical application of those principles? In directing a project or exercising leadership, do you prefer to develop theories and broad concepts and leave the implementation and details to others, or do you prefer to define and direct the details yourself?

Leaders with high SRT are able to design a new bridge or building or a new industrial or medical product without necessarily touching any of the materials required in the construction. In the corporate or organizational environment, this ability enables the leader to show the way in personnel alignment, long range organizational goals and targets, product design, distribution channels, communication facilities, and workplace design. Leaders high in SRT are most satisfied when they can say, “I conceived this,” or “I designed this.”

Leaders who are low in SRT have their feet firmly on the ground. They like to manage projects and get things done. They are the leaders who keep groups and organizations on a steady keel. Leaders with low SRT are most satisfied when they can say, “I did this.”

As a leader with mid-range SRT, you:

- Can theorize about and study interactions in a subject for a future or hypothetical solution.
- Enjoy a blend of tasks that emphasize imagining relationships and interactions that do not really exist and those that are practical.
- Understand the importance of the interrelationships within a system and the individual components.
- Understand spatial concepts and can solve structural problems in your head, and understand the necessity for what is present and practical to provide direct solutions to a problem.
In the corporate or organizational world, leaders high in SRV will be drawn to supervision of construction, management of a lab or technical facility, or direction and management of a production team or process. Leaders who are low in SRV are most satisfied when they can say, “I solved this.” They are exhibiting the tendencies required for work in the service and financial industries.

Psychiatrists and surgeons both receive medical training, but psychiatrists work with patients over long periods of time without necessarily achieving tangible results, while surgeons always work in the concrete world of hospitals, operating rooms, surgical instruments and immediate “hands-on” applications. Both may achieve positive results, but the surgeon would probably not be satisfied in the theoretical world of the psychiatrist, and the psychiatrist may find the life of the surgeon too impersonal and stressful.

As a leader with mid-range SRV, you:

- Prefer a mix of hands-on and abstract activities.
- Can facilitate communication and interactions between people who have a more structural focus and those who have a more intangible focus.
- Can find a sense of accomplishment in both intangible and tangible outcomes.
- Find it relatively easy to create and use concrete examples.
Because SRT and SRV both influence an individual’s ability to deal with the three-dimensional world, we have created a graphic showing how different scores in both relate to each other in suggesting the ideal role for you.

Your combination of **mid-range SRT** and **mid-range SRV** indicates you will be most comfortable functioning in roles capitalizing on your natural **Flexible** Spatial Reasoning abilities.

Leaders with **Flexibility** in their Spatial Reasoning abilities are able to visualize and work in the world of theories, physical laws, and math. At the same time, they are able to participate and coordinate the construction of tangible objects and products. They excel at coordinating and supervising the work of teams made of theoreticians and mechanics. They are able to follow instructions and set to work because they understand the concepts or theories that resulted in the product they’re working on. On construction crews, they will function well as crew chiefs and team managers.
These leaders may need to learn to:

- Lean on workers who can produce new theories and contribute to the “big picture”.
- Find and utilize workers who are able to reduce theories and abstractions to simple and concrete terms and instructions.
- Help their subordinates to express their theories and concepts in concrete terms and with concrete examples.
- Allow a project to begin even if they are unclear of the form and shape of the ultimate product (i.e. the development of a new drug or surgical procedure).
- Understand the importance of relationships, both informal and formal (study the company’s organizational chart).
- Appreciate the important role of feelings in the work environment.
- Understand that others may not have the same flexibility in their ability to reason spatially.
SPECIALIZED ABILITIES

In addition to measures of Personal Style and Reasoning Abilities, the HAB measures a group of Specialized Abilities. Different groups of these abilities help leaders know how they learn best, how they respond to the work environment most effectively, how quickly and proficiently they process new information, and how to develop the skills to communicate their ideas and decisions in a way their associates can understand and follow accurately.

Design Memory

Design Memory is the ability to recall two-dimensional graphic forms. It influences the ability to learn new information through pictures, graphs, charts and other visual cues.

Mid-Range 50%

If this is a strong learning channel, the use of outlines, graphic organizers, color-coding, highlighting, flip charts, power points and white boards will help you learn, recall and communicate effectively. Symbols or drawings placed in the margins of reading material, and use of a variety of fonts or handwriting styles, can enhance the comprehension and retention of printed matter.

Providing graphics, pictures and charts for image learning can be the key to effective organization of large amounts of data. This can simplify the comprehension of key points, and create visually pleasing and powerful presentations of new material.

Your score is in the mid-range for Design Memory. As a leader with mid-range Design Memory, you:

✓ Can consider this a helpful learning channel and will find it useful to reduce any information you receive to graphics, such as diagrams and drawings.

✓ Find it relatively easy to remember two-dimensional visual patterns and are able to work comfortably with visual material, as, for example, with maps, architectural designs, and diagrams of any kind.

✓ Find it relatively easy to remember such things as the location of objects in a room, your way around a new area, or directions on a map.

✓ Will find this ability useful in many scientific, technical, and/or artistic tasks.

✓ Can make use of this ability in communicating with others - reduce your thoughts and conclusions to diagrams and graphs.

✓ Will find this ability helpful in dealing with staff and workers engaged in design – industrial designers, engineers, marketing and advertising personnel, sign makers, etc.

✓ Can find this ability useful in many artistic and technical tasks, but you should not experience any particular stress if your work does not require use of this ability.
Observation, like Design Memory, is one of the visual abilities. Leaders who are strong in both Design Memory and Observation are particularly sensitive to visual cues and stimuli. If Design Memory is the stronger of the two, the leader will respond most to the overall layout or pattern of objects. This explains why some people keep their current work within constant sight, putting parts of the project into stacks and folders that they can see.

If Observation is the stronger ability, the leader’s natural tendency will be to break things down into their component parts and to see small visual discrepancies, whether on paper, in the physical environment, or in facial expressions or body language. Leaders who are strong in Observation can be visually distracted, especially in a new or strange environment. Even in familiar surroundings, leaders with strong Observation may need to keep “clutter” out of sight. They may turn their backs to the door when they’re on the phone, and turn off their monitors when they talk with someone.

When both Design Memory and Observation are strong, leaders can see both the whole and all its details. These leaders respond to “the look” of things - products, documents, physical surroundings. They can use their sensitivity to visual cues to work efficiently with architects, engineers, draftsmen, ad agencies, typesetters and graphic artists. They can also contribute to the work of the company’s designers.

Your score is in the high-range for Observation. As a leader with high Observation, you:

- Will find this ability useful in many areas that require close attention to detail and to visual changes and inconsistencies.
- Can easily bring this ability into play in artistic and visual tasks.
- Can find this ability helpful any time you need to describe the details of some experience, notice small parts of an event, or perceive changes in something you’re looking at.
- Can use this ability in a hobby if it is neglected or underused at work.
- Can use this ability to read facial expressions and the body language of others.
- May need to avoid visual distractions when you work.
A vast amount of information has been accumulated through the centuries in books, treatises, magazines and newspapers - all of it accessible only by reading. Only since the development of telephones and radio have we been able to transmit information widely in any other form than the printed word. If your score in Verbal Memory shows that reading is your strongest learning channel, then continued reference to books, manuals, and other written material is critical to your role as leader.

The availability of information on the Internet has reduced the need to rely so heavily on printed material. It’s possible now to read and learn virtually everything we need to know with our computers. If we wish to keep a permanent record of our new knowledge, we can download and print. E-mail has also provided an important new tool for people who learn best by writing and reading. A leader who depends exclusively on the Web for research should remember that it may be a source of instant enlightenment but that it may be necessary to go more deeply into a subject by reading source material.

Verbal Memory plays a significant part also in associative memory. This is the ability to associate one fact with another with which it is related - for example, the ability to translate a word in one language into its equivalent in another language, or to learn the technical or scientific equivalent of a common word. This ability will be a help to leaders who have to read and digest a lot of printed material.

Your score is in the low-range for Verbal Memory. As a leader with low Verbal Memory, you:

- May experience some difficulty in retaining information from the written or printed word. Reading may be a relatively slow learning channel for you.
- Need to give yourself adequate time when working with written material.
- Can help yourself by “translating” the written word into other learning channels - i.e., by listening to books on tape, drawing diagrams, reading aloud, or associating words with pictures, diagrams or numbers.
- Should encourage your associates to communicate with you in face-to-face meetings.
- Can appoint a staff member to express your instructions, directions and memos in writing.
By the time students graduate from high school, virtually everyone knows whether they learn better by listening to teachers and classmates or by reading textbooks, although some people are fortunate enough not to sense any material difference between the two.

In the workplace, as in school, we learn through lectures and the give-and-take of discussion. We listen to the radio and television every day; we “read” books on tape. Increasingly, we listen to new learning material through our computers; and businesses conduct aural training sessions by telephone and by computer audio.

Leaders who perceive that listening is their strongest learning channel learn to talk and listen to their subordinates instead of writing to them. They prefer meetings to memos and e-mail. They learn to read notes, e-mail, and memos aloud to understand and retain them better. They don’t hesitate to tell others that they prefer meetings and telephone calls to letters, memos, and e-mail. Letting others know of their preference for learning through listening encourages others to communicate with them verbally.

Your score is in the mid-range for Tonal Memory. As a leader with mid-range Tonal Memory, you:

- Can consider this ability a significant learning channel and use it in any formal study.
- Use auditory experiences or devices – i.e., lectures, tapes, discussion groups – to learn new things, unless your score in Verbal Memory is also in the mid-range or higher and you are more comfortable reading new material than listening to it.
- Can learn a foreign language through audio tapes, CD’s and conversation – this will be relatively easy for you, especially if you score mid-range or high in Verbal Memory.
- May experience pressure to use this ability; you may feel frustrated if you don’t.
- Should check your results in Rhythm Memory and Pitch Discrimination; if they are in the mid-range or above, include access to music in your life.
- Have some facility to remember tunes and tonal sequences. This will enable you to sing and play music by ear, and to reproduce the accent and sounds of another language.
- May enjoy learning to play a musical instrument or participate in a chorus.
Rhythm Memory deals with the relationship between the brain and the body’s motor skills. Scoring high on this worksample is helpful to athletes. Rhythm Memory is essential for success in music, especially for conductors and teachers of music. Generally, a person can tell the strength of this ability. A person high in this ability will excel at dancing or soccer, for example, without the need for extensive practice.

For leaders, Rhythm Memory can be as important as a cue to the expressions and conduct of people around them, including their perception of changes in speech and body language. Whether the other person is alone or in a group, a leader with strong rhythm memory will be able to detect whether the other person is displaying tension, anger or hostility - or resignation - or sympathy - or pleasure. This ability is especially useful when the other person’s words belie his actions.

Rhythm Memory can also influence the need for physical movement throughout the day. The stronger the Rhythm Memory, the stronger the need to incorporate physical movement. Rhythm Memory, or Kinesthetic Learning, is the ability to remember rhythm patterns. It influences the ability to learn through movement.

Your score is in the mid-range for Rhythm Memory. As a leader with mid-range Rhythm Memory, you:

- Can translate your sense of motion and time into a significant learning tool.
- Can master an activity which requires repeated actions in a given time sequence.
- Can communicate with your staff by demonstrating the steps in a technique or action.
- Have some ability to reproduce physical movements. Anytime you “act out” or “walk through” a learning activity, you are taking advantage of this ability.
- Should experience no particular problem in responding to music, learning a musical instrument (especially one with a strong beat, like the drums), or moving “in sync” with others in a physical activity.
The HAB offers worksamples in three abilities related to music - Tonal Memory, Rhythm Memory and Pitch Discrimination. We have already described the part played by Tonal Memory and Rhythm Memory in your learning. Your scores in these worksamples also indicate your ability to sense nuances in speech and language. Each musical or auditory ability relates to a different aspect of speech or language. Tonal Memory can be used to remember what is being said, and those who are strong in this ability can often recall verbatim what they have heard. Those strong in Rhythm Memory pick up on the cadence of speech. They can detect the different speech patterns that represent excitement, boredom, cautiousness, fear, nervousness, interest, anger, affection, etc. Those with strong Pitch Discrimination are able to detect the changes in voice inflection that accompany changes in a person’s emotional state.

Any one or all of these musical or auditory abilities can be called upon when a leader is required to respond to changes in the environment. Unconsciously, the leader will use the relative strength of each ability to help respond to the changes. The musical or auditory abilities are important to language learning. A leader who recognizes the importance of precision in communication and who has to deal often with people in other countries, will turn to bilingual translators and interpreters to make sure the information is understood. These interpreters should be fully bilingual and able to speak both languages without perceptible error.

Your score indicates that your Pitch Discrimination is in the low-range. As a person with low Pitch Discrimination, you:

- Have limited ability to pick up subtle changes in tone or inflection by people you deal with.
- Can compensate for this limited ability by concentrating on the normal tone or inflection of these people and detecting and identifying changes.
- Will learn to play a musical instrument more easily if you choose an instrument like the piano that does not require you to set or adjust pitch constantly.
- Should not feel a great press or need to use this ability.
- Are probably not particularly interested in activities that require fine sensory discriminations in color, pitch, taste or scent.
People who learn this way enjoy working with facts and numbers. They remember miscellaneous facts about the things they are interested in, remember lists or facts more easily if they are numbered, and process information numerically (not necessarily mathematically).

The stronger the Number Memory, the easier it is to remember information that is based on numbers especially when related to areas of interest. For example, a person interested in baseball may remember miscellaneous baseball statistics, those with an interest in finance may retain stock prices or the adjustments in interest rates, and educators might remember graduation rates. A general interest in people may result in memorizing birthdays, phone numbers, or population counts on road signs. The reverse is also true; with no interest, there is little recall of the factoids. Interest in a subject comes first, data-gathering later.

Leaders high in Number Memory can capitalize on their ability to process numbers by organizing a subject in a numerical format or in lists. For example, they can define a project by listing seven tasks they have to complete in a day, or by projecting a target into the future through numbers and percentages, or by organizing data in numbers or pie-charts. Leaders who understand the need of some workers to learn through numbers will organize the tasks of these workers to accommodate this ability. Many systems for enhancing number memory have been designed. One system associates each number with a symbol - a spear for the number 1, a sail for the number 4. Another uses words that rhyme - shoe for the number 2, heaven for the number 7.

Your score is in the low-range for Number Memory. As a leader with low Number Memory, you:

- Can remember those facts and numbers you need in your day-to-day tasks, but may have difficulty recalling other numbers or data.
- Can develop compensatory skills for retaining numbers and related data.
- May want to record important data in an easily accessible file.
- Will find it helpful to carry a list of key numbers in your pocket or wallet.
- Can compensate by making a list of associative words or symbols for numbers you need to use regularly.
One inescapable, critical, and potentially log-jamming challenge facing most leaders is the mountains of paperwork they are required to deal with. Paperwork includes e-mail, contracts, presentations, performance evaluations, employee documentation, invoices, reports and much more. The sheer volume of paperwork you, as a leader, are expected to handle makes it imperative that you know and utilize your own natural approach to detail. Developing a strategy for creating and processing paperwork quickly and efficiently can make a major difference in your effectiveness.

The HAB measures two abilities which define how an individual is wired to handle detail and paperwork. They are Visual Speed and Visual Accuracy, both measured in the same worksample. When Visual Speed is significantly stronger than Visual Accuracy, a leader’s natural inclination is to handle paperwork quickly with less attention to accuracy. A leader with this combination knows the best strategy is to:

- Move paperwork along quickly, but make sure that someone else checks it.
- Delegate paperwork when someone else can do it better, but makes sure to review and approve it.
- Allot extra time to handle important documents, including additional review time.
- Learn to slow down when handling critical paperwork.

When Visual Accuracy is significantly stronger than Visual Speed, a leader’s natural inclination is to be meticulous but slow with paperwork. Although there will be few errors, the demand for perfection may take more time. A leader in this combination knows that the best strategy is to:

- Determine when accuracy is more important than speed and slow the work down.
- Spend less time on drafts and memos and more on the final product.
- Delegate routine paperwork, but make sure to communicate the commitment to accuracy.
- Make sure to be the last set of eyes on important documents.
When a leader’s Visual Speed and Visual Accuracy are both strong, handling paperwork becomes relatively easy and may even be enjoyable. A leader in this category can review paperwork quickly and still catch most errors. This leader can feel comfortable in moving completed paperwork along to others. A leader with this combination knows the best strategy is to:

- Allocate and divide work time between paperwork and other responsibilities.
- Be available to review important documents prepared by staff.
- When acting as a mentor, make sure that mentees understand how the paperwork is to be completed.

When a leader’s Visual Speed and Visual Accuracy are both low, handling paperwork becomes a challenge. It may be an inefficient use of time for this leader to handle paperwork at all. A leader with this combination knows the best strategy is to:

- Delegate as much paperwork as possible to others who have proven themselves to be accurate, reliable and efficient in their use of time.
- Reserve some time each day to read and review critical documents.
- Insist that long and complicated paperwork - e.g., contracts, leases, policy memos - be reduced first to outlines and summaries.

Your score in **Visual Speed** is in the **low-range** and your score in **Visual Accuracy** is also in the **low range**. As a leader with this pattern of abilities, you:

- Probably find administrative and bookkeeping tasks slow and frustrating.
- Can improve both your speed and accuracy with practice; you can also help yourself by avoiding tasks that require extensive attention to columns of numbers or words.
- May experience difficulty handling the paperwork required by your job and need to allow yourself enough time to accomplish what you know you have to do.
- May have to take more time to absorb information presented visually.
- Should delegate as much paperwork as possible to your subordinates, but make sure you see and review the final results.
- Must take enough time each day to review and approve critical documents.
- Ask for memos
COMBINATIONS OF SPECIALIZED ABILITIES

The Five Learning Channels

The most effective leaders know how they take in and process new information best. The HAB measures five distinct learning channels. They represent the foundation for an understanding of how people learn. Several other abilities contribute to facility in learning, including some of the Problem Solving abilities and Personal Style. The level of a leader's Vocabulary is also a critical factor in the learning process. Leaders who know their primary learning style, or the most efficient means to learn new information, have an advantage over those who do not. They know to seek out the most comfortable and effective medium when they need to learn something new. Learning is a core competency in any leadership position. The best leaders know how to develop a working knowledge of new subjects, projects, processes and work environments quickly by using the right tools. Unaware, some leaders may also expect others to learn via the same channels they themselves use. High performance leaders understand that different people learn in different ways. They teach themselves to transmit their instructions and messages by the most productive means – measured not by their own learning needs, but by the needs of the individual. Thus, a leader who learns best by the spoken exchange of ideas (speaking and listening) may assume that a worker will also learn best by listening. Unfortunately, the leader may find the worker understood very little of what was heard and that a written memo would have been infinitely more effective. On the other hand, in this day of electronic communication, many leaders limit themselves to an exchange of e-mail when a face-to-face meeting would be much more productive.

Effective leaders learn that when they are required to communicate with large groups - stockholders, the press, community activists, the board of directors, groups of employees - they must provide their presentations in as many formats as possible. To reach the greatest number of people, they convey their message in writing; through pictures, graphs and charts; by spoken presentation; or by inducing the audience to "walk through the process". For many, using multiple learning channels in tandem with one another, is the most efficient means for taking in new information. Ultimately, the effectiveness of the learning process will depend upon which learning channel is used, the amount of time available for learning, the learner's previous knowledge of the subject, interest level in the topic, and the consequences to the learner of not learning. If the information is not available in the one medium that is strongest for the learner (e.g., reading), then the learner may have to call upon one or more of the other learning tools (e.g., listening and re-writing notes).

An important note: High performance leaders are aware that their learning never stops, that learning is a force that drives them on. The greater the number of strong learning channels, the greater the need to find new things to learn. A leader who has three or more strong learning channels may feel driven to move on if the current job no longer offers new opportunities to learn. The drive to learn may compel a leader to seek new challenges. If a leader is happy with colleagues, associates and the work environment, and can't find new challenges at work, turning to opportunities outside of work can provide the answer. Examples include taking courses in a local college, joining a discussion group, becoming a political activist, or volunteering for work with a non-profit organization. On the next page you will find your customized learning channels summary chart. The chart shows the HAB worksample which is used to measure your strength in each channel, the order in which your strengths fall, and how you can put your strengths to the best use.

Additional Combinations

There are certain combinations of the Specialized Abilities that can be important to consider. Your HAB results indicate the following combinations are important for you.

Some Musical Influences. Music abilities include Tonal Memory, Rhythm Memory and Pitch Discrimination. Your combination of scores indicates you have some natural musical ability. You will want to have some connection to these abilities such as learning to play an instrument on your own, taking part in some musical expression like a choir, playing music in the background while you study or work, or incorporating music into events or presentations. Depending on which one or two of these abilities is strongest, you may be more sensitive to particular elements of sound and may find alternative outlets.

Moderately Strong Creative Orientation. The HAB does not have a direct measure of creativity or artistic ability. The combination of Idea Productivity (thinking of many ways of doing something), Design Memory (remembering the overall pattern of something), and Pitch Discrimination (a sensitivity to small nuances of change and the effects of such a change) indicate a creative or artistic orientation. In addition to visual art, these abilities allow you to be creative with any kind of task you do. Your combination of scores indicates you have a moderately strong natural artistic/creative orientation and you will want to choose work roles and other activities that allow you to express your creative side – especially your ideas.
Vocabulary

Although Vocabulary-building is not considered an innate ability, its importance to achievement in the professional world is unquestioned. In large organizations, there is a positive correlation between job level and general Vocabulary - the higher the job level, the more extensive the Vocabulary. Although some fields and professions require and depend upon their own specialized Vocabularies, the scope of one’s general Vocabulary can become the most critical factor in his or her rise from one level to another.

Several tests conducted among the presidents of large corporations have also shown relatively high Vocabularies. In the words of Johnson O’Connor, progenitor of abilities testers:

“The final answer [to the reason that large vocabularies characterize executives and, possibly, successful people in all fields] seems to be that words are the instruments of thought by which men and women grasp the thoughts of others, and with which they do most of their thinking.”

People tend to be most comfortable when they can communicate with other people whose Vocabulary is at a level similar to their own. Leaders with a strong Vocabulary realize this and never miss the opportunity to learn and use a new word or phrase – they refer to dictionaries and web search engines constantly.

Because Vocabulary is a developmental skill rather than an innate ability, leaders with mid-range to low Vocabularies can always improve with diligent and focused effort. To improve most efficiently, they will learn to apply one or more of their most effective learning channels. **Image learners** can associate each new word with a picture that represents the meaning of the word, or they can color-code the list of new words they want to learn. [Students of Chinese and Japanese know that many of the characters suggest their meaning in their design.] **Readers** can look new words up in a dictionary or enroll in a computerized word-a-day email program. **Listeners** can read and reread the new definitions aloud or utilize recordings in the car or at home. **Kinesthetic learners** can move (walk on a treadmill, pace, act out the meaning) while they recite the definitions of new words. And **Number learners** can organize new words into lists that include their synonyms, antonyms or other keys.

The norms for the Vocabulary worksample on HAB are at the level of the average College student.
Your score on this worksample is in the high-range. As a leader with a strong Vocabulary, you:

✔ Have a head start in moving up in the executive ladder.

✔ Possess a broad range of knowledge that enables you to function well in any assignment or job requiring quick comprehension and the ability to communicate.

✔ Can easily understand and handle the work required of corporate executives, individuals in literary and academic fields, doctors and lawyers, and those at or near the top of almost every other profession.

✔ May find yourself bored or disconnected if you spend the majority of your day in close contact with people who have a significantly lower vocabulary than your own.

✔ Feel comfortable communicating with a wide range of people.

✔ May need to adjust your speech with people on other vocabulary levels to be understood by them.
This report reflects your results on the Highlands Ability Battery (HAB). It provides you with a detailed explanation of your natural abilities, what they mean for you, and how they relate to your role in Leadership. Your Highlands Certified Consultant will review your results with you individually or as part of a group. This Debrief will build upon the information in this report so you can make maximum use of your natural abilities now and in the future.

Our Certified Consultant have received 30+ hours of HAB-specific training to become certified. They have the knowledge to help you understand your ability patterns and apply your results to your specific roles and responsibilities. They can help you look at the future and to figure out ways to continuously apply your abilities.

If friends or family members are interested in taking the HAB, ask your Certified Consultant about making those arrangements. You can also find all of our HCCs listed on the Highlands Company website www.highlandsco.com.

The Highlands Company retains all client reports. You are welcome to contact us if you need help locating your information in the future by contacting:

The Highlands Company
